GMSH .MSH Converter Short Guide

Read Original Article by Dip28 here:
http://dip28p.web.fc2.com/calculix/gmshconvertviamsh/index.htm
(or in PDF copy in the folder: \c4w\Hlp\conv\GmshMsh_by_Dip28.pdf)

GMSH saving options are shown on Fig.1:

- Save as **gmsh.msh** (don't check **any option**)

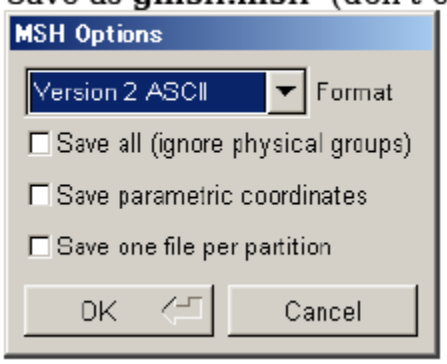

Fig. 1

Also see the detailed example below.
First, see Fig 4... Fig 14 in "Unv_Converter.pdf" file (how to deal with STEP geometry and mesh it)

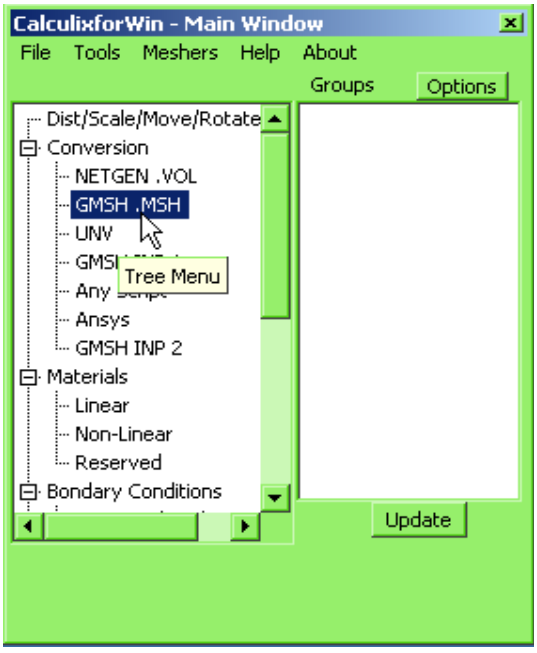

Fig. 2 Run CalculiXForWin > Conversion>GMSH.MSH

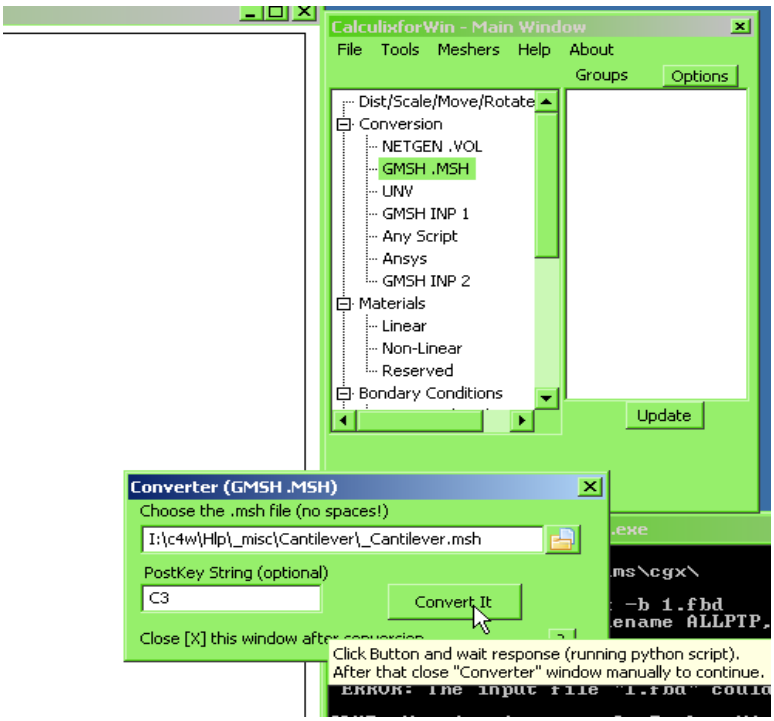

Fig. 3 - Set path to .msh (v2) file, and press "Convert It". Then close the window manually.

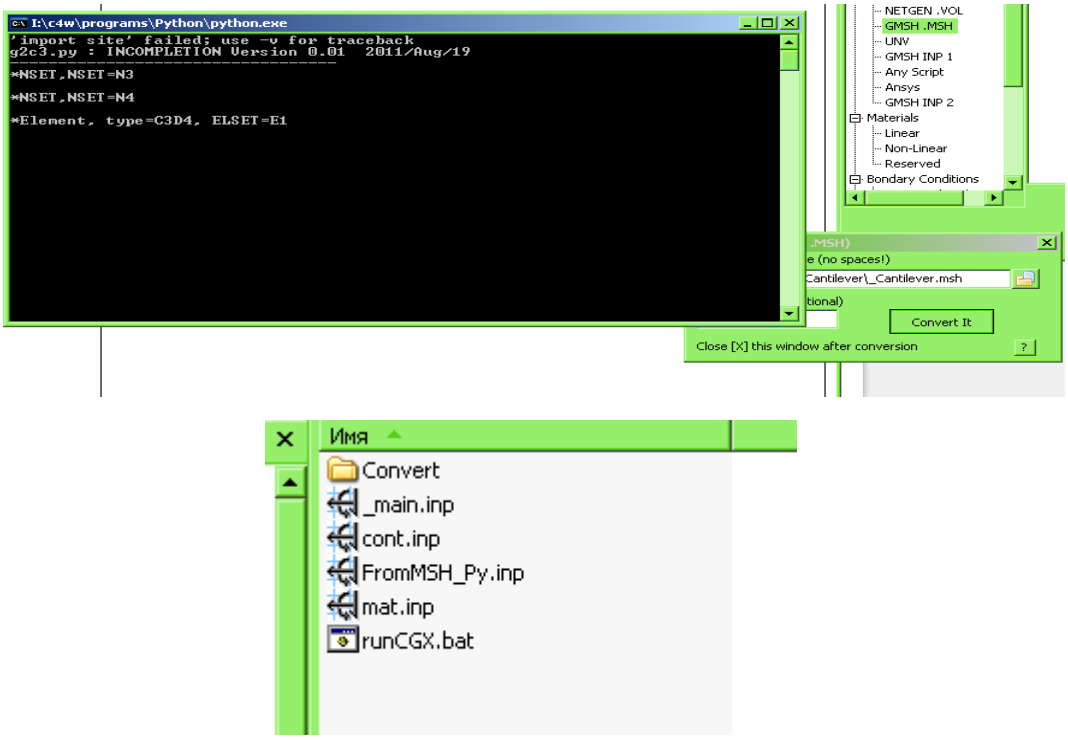

Fig. 4 - When conversion is done the "FromMSH_py.inp" file appears in the working folder

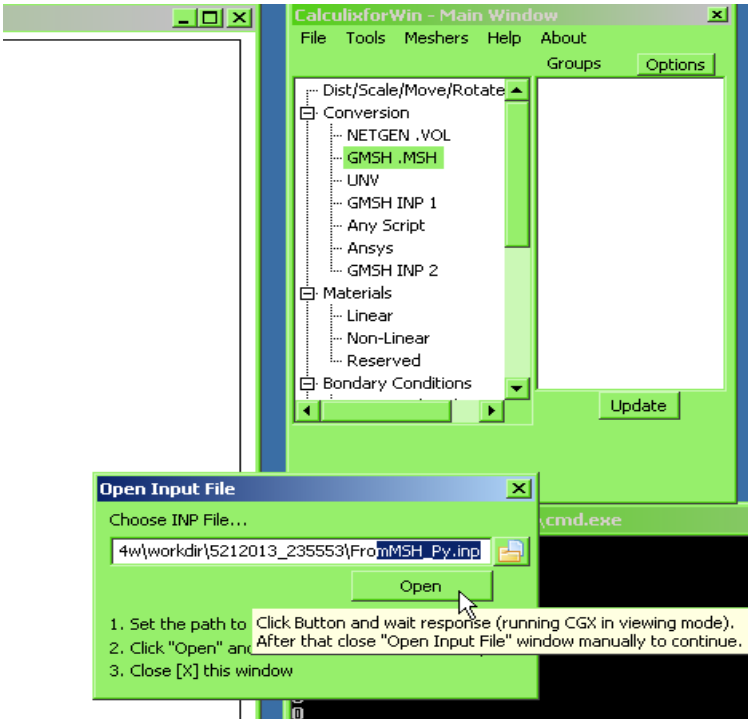

Fig. 5 - Go the the CalculiXForWin Menu >File>Open CCX INP Choose the converted file in the working folder and press open. New CGX window will be opened.

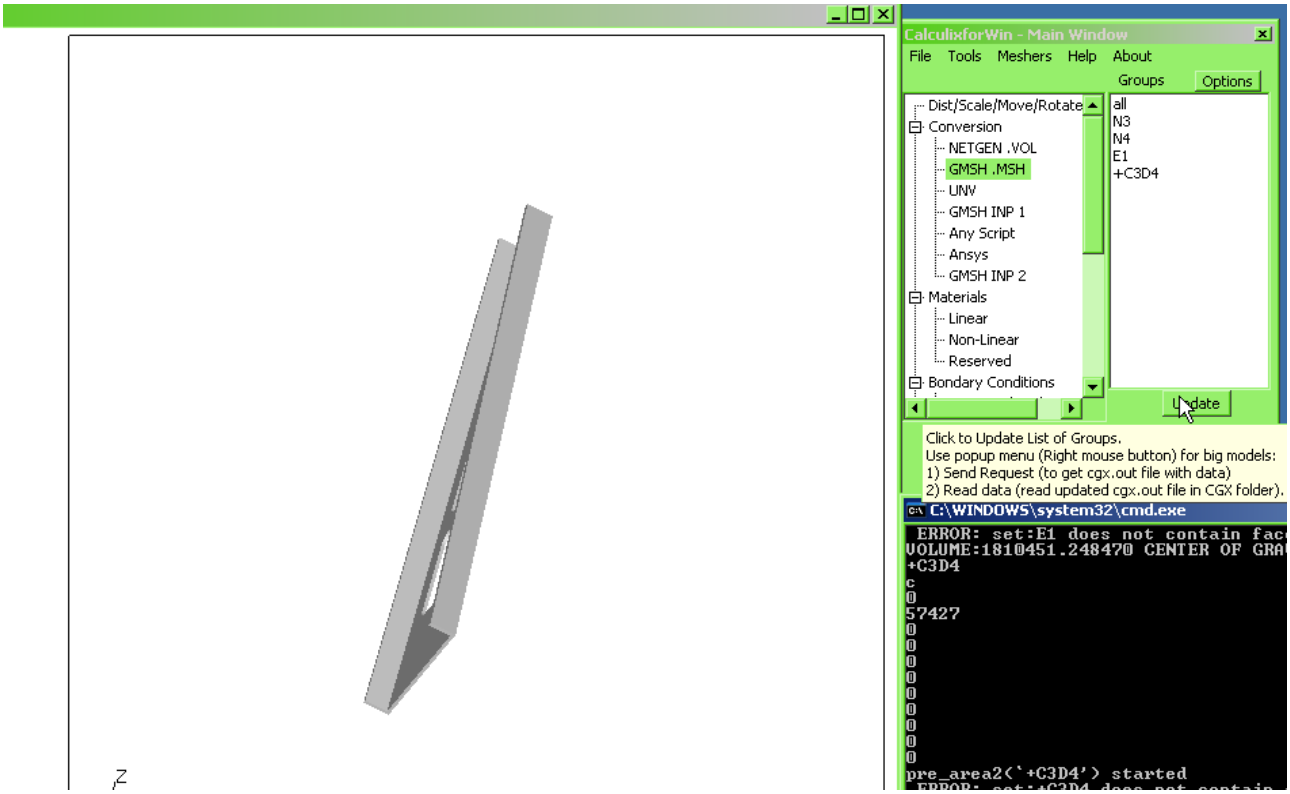

Fig. 6 - Press "Update" button under the list box and see the list of groups.

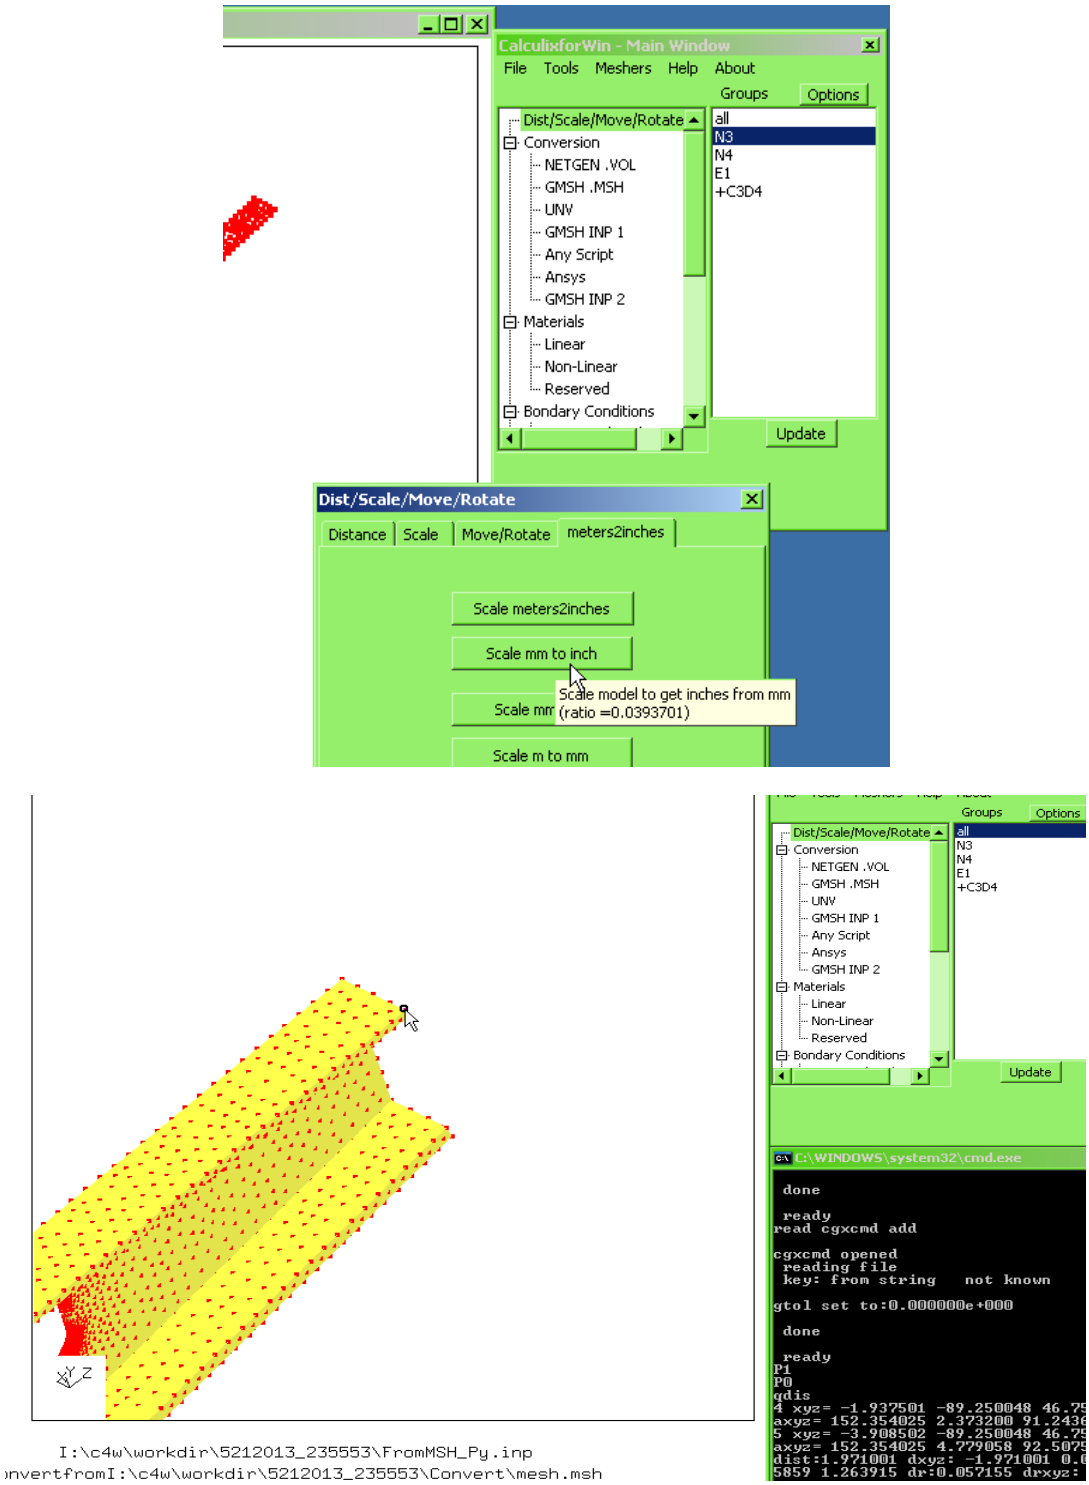

Fig. 7 - This model came from the .STEP file and most probable, you need to check the dimensions (with "qdis" card and scale it).

The rest part of this example see in "Unv_Converter.pdf" file (Fig. 20...35)
Also you are able to create MSHv2 files with using export in the NETGEN program.
